Malware or legitimate?

If you feel that you need more information to determine if you should keep this file or remove it, please read this guide.

And now some shameless self promotion ;)

Hi, my name is Roger Karlsson. I've been running this website since 2006. I want to let you know about the FreeFixer program. FreeFixer is a freeware tool that analyzes your system and let you manually identify unwanted programs. Once you've identified some malware files, FreeFixer is pretty good at removing them. You can download FreeFixer here. It runs on Windows 2000/XP/2003/2008/2016/2019/Vista/7/8/8.1/10. Supports both 32- and 64-bit Windows.

If you have questions, feedback on FreeFixer or the freefixer.com website, need help analyzing FreeFixer's scan result or just want to say hello, please contact me. You can find my email address at the contact page.

Comments.

Please share with the other users what you think about this file. What does this file do? Is it legitimate or something that your computer is better without? Do you know how it was installed on your system? Did you install it yourself or did it come bundled with some other software? Is it running smoothly or do you get some error message? Any information that will help to document this file is welcome. Thank you for your contributions.

I'm reading all new comments so don't hesitate to post a question about the file. If I don't have the answer perhaps another user can help you.

Microsoft Outlook Not Working After Latest Windows 10 Update.

So my business partner and I both use Office 365 and are satisfied. We are on completely separate accounts. I updated at home on January 9, 2018 for my laptop. His desktop automatically updated. Now neither one of our Outlook Programs work When syncing they give an error, something like 0x. 83 something error. I worked on mine 3 hours yesterday (My business lives on email) and I got it to sync when I disabled my Avast email protection. Problem is, when I trash an email, it does not sync somewhere along the line and my phone email box with the same account information states the email I just trashed and deleted on my laptop has not even been read yet.

So my question is ultimately, how do I get my Outlook back to the way it was? How do I get my email virus scan option with Avast to work again? This update seems to be a big blunder.

Computer Dell Inspiron 1500 running Windows 10. The system is a little over one year old.

Open Start > Settings > Apps > Apps & features Scroll down to Microsoft Office Select it Click Change.

Now, wait while the repair wizard starts up.

Choose the type of repair you would like to perform. Depending on the severity or availability of your Internet connection, you could try the first option, Quick Repair, which is much faster and tries to fix the problem without a data connection.

If that doesn't resolve the problem, then go back and try the Online Repair option. For my particular issue, I ultimately had to use the Online Repair.

The repair process is straight-forward following the wizard. Note that you'll need to save your work and close all Office programs first, and then click Repair.

Then wait while the repair process runs.

You will notice the repair experience is similar to a fresh installation. The amount of time it takes will depend on your connection speed and what

the issue is.

You will see your Office apps light up in their respective colors while the repair completes.

Once the installation is complete, restart your computer just to be sure and launch your apps and verify if the problem you were having is resolved.
